

Press release 05.05.2026

11 million LoRaWAN® sensors: Our LoRaWAN® network continues to grow.

It was only in September 2025 that the ten-millionth sensor was integrated into the Minol-ZENNER Group's LoRaWAN network. Since then, our network has continued to grow steadily and the next milestone has already been reached: there are currently 11 million devices active on the network.

This sustained growth underscores the growing importance of scalable networks for digitalisation. In the water sector in particular, it is becoming increasingly important to operate infrastructure in a high-performance and resilient manner. Continuous monitoring is becoming a key prerequisite for future-proof network operation.

ZENNER has set itself the goal of rolling out its current Smart Water solutions nationwide by 2026. To this end, we offer Smart Water solutions for the entire process chain – from water level monitoring and water body monitoring, through ensuring distribution within the supply network, to transparent consumption metering in buildings.

“ZENNER is a very special partner for us: not only does the company operate the world's largest LoRaWAN® network, but it also brings a wealth of experience in the fields of metering, sub-metering and smart city projects. This combination of practical experience and in-depth industry knowledge is extremely valuable for the further development of LoRaWAN,” explains Alper Yegin, CEO of the LoRa Alliance®.

This new milestone underscores the importance of LoRaWAN® as a key technology for municipal utilities and the water sector.

About ZENNER

ZENNER International GmbH & Co. KG is a leading global provider of innovative solutions for municipal utilities, energy suppliers and local authorities. The company develops and produces measuring technology for recording water, heat and gas consumption as well as digital solutions for the Internet of Things (IoT) for the digitalisation of the smart city. From measuring technology and sensors to LoRaWAN infrastructures and data services to the finished application, ZENNER offers everything from a single source. With well over 10 million measuring instruments and sensors produced each year and experience from over 450 successful IoT projects, ZENNER is a pioneer in the smart city sector. ZENNER, headquartered in Saarbrücken, operates production facilities in Europe, Asia and the USA and has 60 locations worldwide. Founded in 1903, ZENNER is now part of the international Minol-ZENNER Group, which employs more than 4,400 people worldwide.
