MikroTik – a leading European networking manufacturer – joins the LoRa Alliance®

The **LoRa Alliance®** announced that **MikroTik**, a leading networking hardware and software manufacturer focused on security and innovation, has joined its ranks as an adopter member.

"We are pleased to join forces with some of the brightest minds in the networking tech eco-system field. The partnership of passionate networking visionaries is vital if we want to build a smarter future for the whole world. Together we can provide more tools for people of all walks of life to create new jobs, start all kinds of research, or simply facilitate their day-to-day needs," says Deniss Truhanovs, the Head of Innovation at **MikroTik**. "Our mission is to make existing Internet technologies faster, more powerful, adaptable, and affordable to a wider range of users. And as a member of the **LoRa Alliance**, I'm sure we can make that happen in more ways than ever before. Let's build something great together!"

Since its beginning more than 25 years ago, **MikroTik** has been producing its own software and hardware to satisfy the most diverse client base. Their solutions include 60 GHz products, routers, switches, wireless systems, and LTE/5G products, with over 250 products being designed and developed in Riga, Latvia. In the recent years, they have also proved themselves to be a strong player in the IoT market, with instant classics like the MikroTik KNOT LR8/9 kit: an out-of-the-box gateway solution for LoRa® with NB/CAT-M, Bluetooth, Ethernet with PoE, RS485/Modbus, and plenty of other useful features.

"We love creating innovative, utilitarian products. But we love seeing all the brilliant setups that our users come up with even more. Creativity is at the core of our values. The versatility of our RouterOS software is unparalleled. We often say - if you can imagine it, RouterOS can achieve it. So we are especially excited to see what the **LoRa Alliance** can come up with. We have a solid range of tools for you to explore: a separate gateway card for custom setups, the automotive LtAP GPS kits for LoRa, weatherproof gateway kits, Bluetooth tags. And no plans to stop expanding the product line. So try them out and let us know what you think!" Mr. Truhanovs put forth.

MikroTik has over 800 distributors in 130 countries. Their enterprise-grade products with consumer-grade pricing are used by ISPs, individual users, and companies for building data network infrastructures all around the world – even in space research, ocean research, and on Mount Everest.
