

OrionM2M is now for the USA!

"The first half of 2020 was a difficult period for the industry. However, we were able to focus on developing new equipment and upgrading existing ones," said Denis Fedorov, CEO of the company.

OrionM2M team has developed a new radio modem for gas meters, a radio modem with a temperature and relative humidity sensor, technologies EasyTool (a method for wireless administration of equipment), and BatteryCare (energy efficiency).

The company's next equipment is now available in the US915 radio frequency range:

- ORIONMETER LA-IP pulse radio modem;
- ORIONMETER LA-IP-RSP working on the RS-485 interface radio modem;
- ORIONMETER LA-IP-I2C temperature and relative humidity radio modem.

"We are always on-trend, always looking for something new. To sum up, we declare ourselves in the US market and invite American companies to cooperate," said Andrey Zyryanov, CCO of OrionM2M.

The reasons for entering to America are the advanced and large market capacity, the availability of all the necessary infrastructure of LoRaWAN, and a large number of networks from major operators.

The American market is ready to accept us, and we are ready to provide it with new innovative solutions.
