

Launches its advanced LoRaWAN™ Professional Gateway Range

XTERCONNECT announced today the launch of a new range of professional LoRaWAN™ gateways. The flagship models GTW410-L and GTW410-L4G are advanced professional indoor gateways engineered to meet the growing needs of the LPWAN market.

The GTW410-L and GTW410-L4G are designed using the DB4 platform from Geniatech, known for its powerful performance and reliability, based on a quad-core (4 x ARM53, 64-bit) processor, combined with 2GB of DDR3 and 16GB of eMMC, enabling the Gateways to truly perform as a standalone embedded network and application server. The GTW410-L and GTW410-L4G (with integrated LTE 4G module) combine advanced features, power and remote management, enabling seamless network installation and data flow to maximise performance and efficiency, making them the best-in-class professional gateways.

Combining wireless connectivity, industrial grade design and intelligent networking capabilities both, the GTW410-L and GTW410-L4G are available immediately in LoRa® 868MHz and shortly in 915MHz, with outdoor versions soon to follow. A further five models are planned for launch in 2019 to complete a full range of gateways to address the wider market needs.

Xterconnect President, Christophe Genevois said: “Today’s private IoT networks and applications require full standalone network and application solutions and our range of advanced professional gateways enable a cost-effective solution for clients to become a private LoRaWAN™ operator, expand their network reach and enhance its capabilities.”

CEO & Chairwoman of the LoRa Alliance™ **Donna Moore** said: “We have seen an explosion of growth in LoRaWAN™ deployments over the past year, supported by our extensive member ecosystem and the wide range of solutions they provide. It is exciting to see a member company launch a new line of products to support the market demand. The ability to quickly rollout a private network where it is needed is a key differentiator of LoRaWAN technology and members like XTERCONNECT are helping to fulfill the growing demand.”

About XterConnect:

XterConnect is French based technology innovation and solutions provider and a LoRa Alliance member, developing advanced products and services and delivering turnkey IoT LPWAN solutions using LoRa® low-power wide area network technology. Our ecosystem is based on our XterWorks secure cloud management platform and XterMobile application, enhancing network features and device life cycle management for both public and private network clients on a global scale through a network of strategic partnerships.
