

iiote expands and opens office in Stockholm

Gothenburg 2019-03-18

iiote opens new office in Stockholm in cooperation with their partner Qualit Solutions AB. There is an evident momentum on the Swedish market with increased sales potential of IoT solutions to e.g. the building construction industry and real estate.

iiote announces establishment in the ICT cluster Kista (Stockholm) in collaboration with their partner Qualit Solutions AB in their premises and iiote will additionally strengthen their sales organization with a sales executive responsible for the Stockholm region. The company also says that the effort is being made to meet the increasing demand now that LoRaWAN™ has established itself as the de facto standard IoT networks in Sweden.

iiote refers to the fact that over a hundred municipalities/cities already have or are in the process of deploying LPWA networks (Low Power Wide Area) in Sweden to meet the Swedish Parliament goal that Sweden shall be the best in the world to use the possibilities of digitalization. There are several private and public LoRaWAN™ operators in Sweden and iiote collaborates with all operators being an independent system integrator and supplier of IoT solutions.

The expansion of IoT networks gives us a perfect foundation to be able to offer potential customers the commercial IoT solutions we have in our portfolio. These are available solutions that solves many problems within the real estate and building construction industry. Furthermore, we are helping customers with additional tailor-made innovative IoT solutions including a variety of sensors from the well-established ecosystem LoRaWAN™, says Robert Spertina CEO of iiote AB.

iiote contributes to Sweden's goal to be the best in the world to use the potential of digitalization.

iiote - make sense of IoT

About iiote AB

iiote work with companies, organizations and municipalities in implementing IoT in their business, from analysis need and strategy to planning, implementation and system integration. iiote has expertise in IoT, IT and Telecom, combined with industry-specific skills from the construction, machinery and automotive industries. iiote integrates solutions that drive the development of simple and innovative IoT in the community. This is enabled by radio systems that use low-energy technology, Low Power Wide Area Networks (LPWAN).
