

Consortium agreement concluded between iiote, Netmore and Qualit

Gothenburg 2019-09-16

The consortium partners will work together and propose smart LPWAN IoT solutions based on LPWAN and 3GPP technologies to end-customers such as insurance companies, real estate companies and municipalities.

Note that the collaboration is non-exclusive, and each party have the ability and incentive to compete independently and with third parties.

"Our proven innovative LPWAN solutions are ready to meet the rapidly growing IoT market in Sweden. iiote has always proactively looked for collaboration allies to strengthen the offering to end customers and an important step has now been taken with this consortium where iiote together with Netmore and Qualit will make really good solutions even better" says Robert Spertina, CEO of iiote.

"We are proud to be selected as the IoT-operator in the cooperation. To be successful in large scale projects close cooperation between the different parties is essential to secure high-quality solution and delivery within budget and schedule. Cooperation is close to our heart because Netmore strongly believes in building and to be the natural partner for ecosystems within IoT. This is true for all our business areas with different access technologies such as LoRaWAN®, WiFi or the mobile networks." Says Martin Edofsson, Head of Products and Projects at Netmore.

"We have been preparing our organization for several years for the coming demand for IoT system integration and IoT system deliveries. As demand now rises sharply, we are well equipped, and with a very competent network of partners to meet our customer needs, regardless of technology choice." says Per Meurling, CEO of Quality IT Solutions AB.

iiote - make sense of IoT

About iiote AB

iiote work with companies, organizations and municipalities in implementing IoT in their business, from analysis need and strategy to planning, implementation and system integration. iiote has expertise in IoT, IT and Telecom, combined with industry-specific skills from the construction, machinery and automotive industries. iiote integrates solutions that drive the development of simple and innovative IoT in the community. This is enabled by radio systems that use low-energy technology, Low Power Wide Area Networks (LPWAN).

About Qualit AB

QUALIT provide and deploy IT and telecom infrastructure. We deliver an entire process from technical assessment, installation, commissioning and implementation of equipment and services. We are independent of technology, make and other locks and can thus help you find an optimal technical solution for your facility network, your office network or other implementation. We have a high level of technical expertise in the field of data and telecommunications networks (both fixed networks and radio solutions), system integration and other applications that are necessary for you to have the optimal solution.
