IoT Platform

(CLOUD or ON-PREMISE)

150+ LoRaWAN®

Managing water life cycle, a truly challenging but promising market

- Water is a worldwide critical resource as well as a sustainable development challenge :
 - Utilities are losing **up to 30%** of their water supply through leakages
 - The revenue of global NRW (Non-Revenue Water) management solutions market mostly due to water leaks will grow from \$850.5 million in 2018 to \$1,594.3 million by 2025 according to a Research & Markets study dated Oct. 2018
- Water treatment plant management efficiency is key for quality cost-effective production of drinking water
- Water metering services allow to avoid over-consumption

Not to be shared without prior consent from the LoRa Alliance

LoRaWAN® solves several key issues for Smart water applications

- Why LoRaWAN® is relevant for smartwater applications?

- A complete **ecosystem** with a wide range of smartwater IoT devices:

- Meters
- Valves
- Sensors (flowmeters, dry contacts, ...)...

Not to be shared without prior consent from the LoRa Alliance

- **True deep indoor** capabilities

- Low consumption devices complying with long-lasting requirements of water industry

- Ability to combine **private and public deployments**, depending on business models, constraints and markets

Smart water applications for REUNION telereleve

REUNION Telereleve is both an engineering company specialized in water infrastructures and a LoRaWAN® service provider

Challenge: Need to aggregate different sensors, actuators and meters

Target markets: property managers with hundreds of buildings to manage and cities

Solution:

- Private network and device management => full infrastructure managed by VERTICAL M2M
- Maddalena smart water metering
- Strega electrovalve
- Adeunis MODBUS
- Adeunis Dry contact

LoRaWAN Benefits:

- Advanced value added services (water leak detection in buildings)
- Front-end / web application for customers
- LoRaWAN benefits : deep indoor, private network

Next steps : aggregate more devices, grow predictive services in water management

- **Potential market : > 15 000 meters and sensors within 3 years**

Not to be shared without prior consent from the LoRa Alliance

Unlocking smart water usages for BRL

BRL exploitation (France): Engineering company specialized in water infrastructures

Challenge: Aggregate different sensors and meters

Target markets: agriculture, industrial customers and residential customers

Solution:

- Device management through various public networks
- Advanced value added services (KPIs for water management, full remote configuration of devices...)
 - Water meters
 - Adeunis analog
 - Adeunis Pulse
 - Adeunis dry contact

LoRaWAN® benefits: deep indoor, use of public operator networks in France

- Next steps: implement more remote IoT services to improve operations and lower costs
- Potential market: > 5,000 sensors and meters within 3 years

Not to be shared without prior consent from the LoRa Alliance

Low Voltage Electricity Distribution Networks Monitoring & Analyzing System

Not to be shared without prior consent from the LoRa Alliance

CHALLENGE

Most of the electricity distribution companies know nothing after the substation.

All of them monitoring the electricity distribution grid with SCADA systems until the substation but nobody knows that valuable data that will contribute to the decision-making mechanism is hidden in substations.

NetOP brings this hidden treasure to light and blend it with AI.

Power Distribution Substation

One of the arteries feeding the city
If really monitored and analyzed
it's easy to reach tons of results

Electricity Distribution Company
Municipality
City Council
Police Department
Fire Department
Government

need BIG DATA to make decisions

Values Monitoring

- Zero I Current
- Voltage (PH1 PH2 PH3)
- Current (PH1 PH2 PH3)
- Frequency (PH1 PH2 PH3)
- Power Factor (PH1 PH2 PH3)
- Power (PH1 PH2 PH3)
- Voltampere (PH1 PH2 PH3)
- Total Harmonic Distortion I
- Total Harmonic Distortion U
- Harmonic 3 (PH1 PH2 PH3)
- Harmonic 5 (PH1 PH2 PH3)
- Harmonic 7 (PH1 PH2 PH3)
- Harmonic 9 (PH1 PH2 PH3)
- Harmonic 11 (PH1 PH2 PH3)
- and 40 different more...

NetOP Octopus V1
Substation Electricity Monitoring Analyzer

Not to be shared without prior consent from the LoRa Alliance

Easy to deploy
Easy to use
Easy to install
Affordable cost
Independent
Network
Secure
Scalable
Sustainable

- 3-phase electricity monitoring sensor for low voltage substation feeders
- NetOP Octopus can monitor substations feeder by feeder / phase by phase and collect data in real time
- Generated big data analyzed by AI algorithms
- Alerts & Reports generated instantaneously and forwarded to relevant units
- Embedded LoRaWAN® connectivity inside

USE CASE: Detection of Abnormal Power Usage

With the help of smart sensors developed by NetOP, the city's electricity consumption is monitored from substations and recording "electricity consumers" that signed the electricity grid with a unique signature. The big data generated is analyzed by AI-powered algorithms and it gives a possibility to reach back-to-date, real-time and predictive decisions.

All units that work for a better city can benefit dozens by using this data. It can prevent frauds, leakages, manipulations, accidents, breakdowns, even crime.

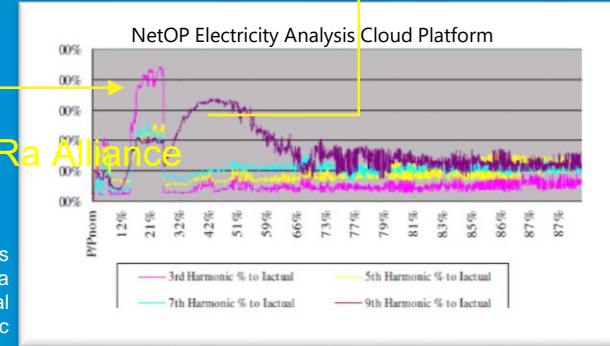

Indoor Cannabis Farming

This kind of bulbs effects Power Harmonics and signs the power grid with the unique signature (Harmonic 3 effected)

Not to be shared without prior consent from the LoRa Alliance

AI powered algorithms analyzing harmonics data and detect an abnormal situation on 3rd Harmonic

With NetOp, Incredible digital transformation from “knows nothing to predictive”

3. Critical Monitoring of energy transport infrastructure

Massimo Marini, CTO from PROESYS
m.marini@proesystech.com

**Creating
Valuable**

IoT

Connections

Not to be shared without prior consent from the LoRa Alliance

ENERGY TRANSPORT USE CASE: Structural integrity of HV Pylons

Customer requirements:

- diagnostics of excessive stress on the structure
- Structure collapse due to fatigue or landslide or severe weather
- physical attack / sabotage detection / copper theft

LoRa technology and the use of a private LoRaWAN® network are ideal solutions to monitor the **health of critical infrastructure and HV pylons, installed in remote areas with no public network coverage**

ProEsys developed a custom sensor performing real-time **Inclination, Vibration and Spectral analysis** :

discriminating the periodic oscillations of the tower from intentional tampering with mechanic tools.

ENERGY TRANSPORT USE CASE: Structural integrity of HV Pylons

- Custom sensors
- Rugged gateways for hostile environments
- Network server infrastructure

Any **anomaly triggers an alarm sent in real-time** over the LoRaWAN® network together with the exact position of the HV pylon.

Not to be shared without prior consent from the LoRa Alliance

What we wanted to monitor:

- Integrity and verticality of HV pylons
- Protection against attacks and sabotage
- Prevention against copper theft
- Temperature of pylon
- Other specific applications

Advantages of LoRaWAN® Technology for Customers

Long Range: suitable for nationwide coverage of rural and mountain areas not covered by GSM, LTE and NB-IoT.

Low Power: sensors live up to 10 years on battery → reduced maintenance for hard-to-reach sites.

Ideal for **private and closed network** solutions with no internet access → required by critical infrastructure owners.

Not to be shared without prior consent from the LoRa Alliance

All network elements under **full control of network owner**: sensors, gateways, network server, application server → a must for critical infrastructure owners, some require source code of all equipment.

High level of cyber security in the entire signal chain.

Remote parameter changes on sensors, up to entire firmware upgrade.

Standard protocol ensuring compatibility with different vendors of sensors and gateways.

Massive Car Tracking Using LoRaWAN®

Maxtrack

**Creating
Valuable**

IoT

Connections

Not to be shared without prior consent from the LoRa Alliance

ABOUT MAXTRACK

- Leading GPS tracker manufacturer in Latin America for more than 10 years
- More than 3 million devices sold in Brazil over the last 20 years
- Design house in Beijing, logistics hub in Hong Kong, factory and R&D in Brazil
- Supplier of largest insurance companies and tracking companies in Brazil
- Leading data analytics platform for real time driver behavior analysis and theft, crash, fraud and fail detection

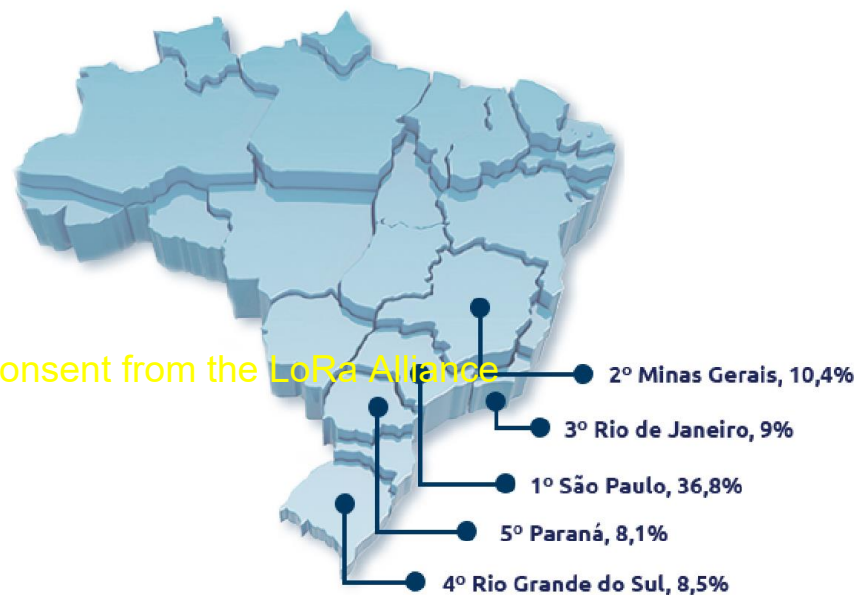

Not to be shared without prior consent from the LoRa Alliance

ABOUT BRAZILIAN FLEET

- In Brazil we have around 65,8 million cars and motorcycles, 5 million small trucks and 2 million trucks
- More than 70% of the fleet is within 5 states, concentrated in the metropolitan areas of these 5 state capitals

ABOUT GSM AND LoRaWAN® NETWORKS IN BRAZIL

- GSM 2G covers about 93% of the population, corresponding to almost 4 thousand cities
- Phase out of GSM 2G has already started, with connections degrading more and more every month, but CAT-M1 or NB-IOT coverages are still not available. 3G is announced to be approaching end of life as well
- Cost of GSM 2G data is around US\$ 1/month for M2M sim cards with 10MB plans and cost of 4G LTE is about US\$ 7,50/month for the cheapest data plans, so there is a huge gap between these options, not to mention hardware cost impact
- American Tower has started its LoRaWAN® network last year and it covers about 35% of the population presently, with plans to reach 85% of the population by 2020

Not to be shared without prior consent from the LoRa Alliance

ABOUT INSURANCE AND GPS TRACKING IN BRAZIL

- Every year, about 650K vehicles are stolen in Brazil (nearly 1% of the fleet), with some areas showing almost 3% rate, like Rio de Janeiro metropolitan area
- About 20% of the fleet have insurance, which is not mandatory in Brazil. Insurance companies have several restriction rules for covering professional drivers like Uber's or to cover old cars. GPS tracking is applied to only 5% of all insured cars, mainly to help recovering stolen cars above a certain value
- Another 4% of Brazilian fleet have some kind of loss protection or tracking service, but not a formal insurance, neither with any kind of roadside assistance
- Average cost of insurance in Brazil is about US\$ 800/yearly, while non formal protection costs about US\$ 250/yearly and GPS tracking services about US\$ 180/yearly
- 76% of the fleet in Brazil (more than 50 million vehicles) have no insurance, protection or roadside assistance at all

Not to be shared without prior consent from the LoRa Alliance

MAXTRACK'S STRATEGY TO INTRODUCE LORAWAN

- Show LoRaWAN® as a way to mitigate risk of 2G shut down
- Workaround CTO's dilemma between LPWAN technologies giving them options
- Use GSM/LoRa enabled vehicles to work as repeaters to provide connectivity outside of network coverage footprint.
- Create a LoRa peer-to-peer layer to allow a local network between devices
- Create an emergency beacon channel to help recovery teams to find stolen vehicles
Not to be shared without prior consent from the LoRa Alliance
- Enhance LoRaWAN-only devices with context awareness (via neural network) to minimize raw data transfers and so compensate for a smaller bandwidth than GSM
- Highlight LoRaWAN not as cheaper than GSM technology, but as a rich companion technology instead (customers are paying a premium for devices with GSM and LoRaWAN)

ROADMAP

- Scale Maxtrack's LoRaWAN® solution (devices + device management + data analytics platform) as a solution to be deployed for all cars with insurance/roadside assistance in Brazil - already ongoing with biggest roadside assistance company in Brazil and second biggest insurance company
- Ramp GoS2, a company to offer some very cheap tracking and roadside assistance package to those 76% of the fleet which have no insurance or protection at all (about 50 million vehicles) in a very disruptive commercial model
- Create with biggest risk management company in Brazil a platform for having trucks working as multi-channel LoRaWAN gateways capable of "scanning" all goods being transported
- Create retail smart hubs to work as "last mile" LoRaWAN gateways, to guarantee coverage at critical points and to allow firmware updates and low cost indoor/outdoor location to all LoRaWAN only (no GSM) devices

Thank you!

B2B2C: Order and delivery Services for Partners

POST Home Button (PHB)

The innovative functions explained

Button:

With a click on the trigger button, the scan of an OID Code is carried out and the order is triggered. The amount due is automatically deducted from the once-off payment.

Status Display

If the scan was successful, the status bar lights up green after a short time.

Order Card

The customer can order products with the code on the order card. It is physically sent to the customer by post. Instead of a "card", any printable format can be used, including **catalogues, flyers or an imprint directly on the packaging.**

Antenne und Funkmodul

The button sends and receives data via a LoRa radio module. The LoRaWAN® has a network coverage of 95% of the Swiss population, is designed for the transmission of very small amounts of data and requires extremely little energy.

Battery

The integrated battery has a service life of up to 10 years on average usage. If the battery tapers towards the end, the button triggers the replacement by itself.

OID Reader

The OID-Scanner is located in the head of the Home button. It is activated by pressing the button and can reliably read the OID Codes within milliseconds.

Scan area with OID-Code

The so-called OID Code (Optical Identification Code) contains product and service information. The code is read at the push of a button and transmitted to the post office by LoRaWAN®.

Not to be shared without prior consent from the LoRa Alliance

APPLICATION

1. Hold read head on scan area and click

Traditional LoRaWAN® – NS, JS, & AS in Cloud

What is Driving Enterprise Networks

Demand for Robust & Agile Local Connectivity:

Cost Efficient deployment architecture
Improved Resiliency & Security

Lowest Total Cost of Ownership

Less data backhaul, cloud routing, storage and compute costs and OpEx

Deep Local Coverage

Clustered assets mostly Static

Data Privacy

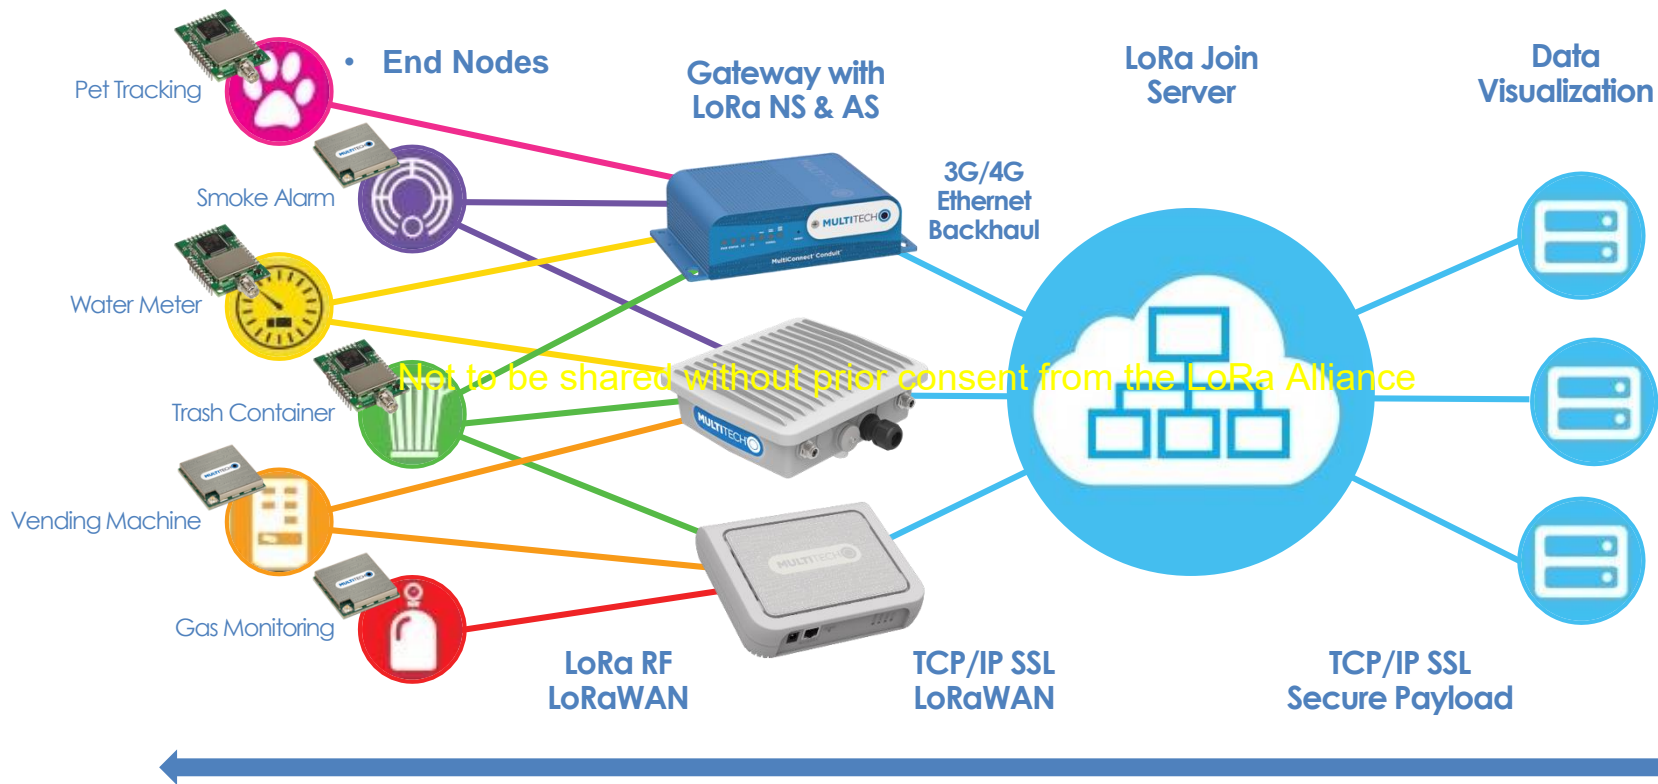

Data remains On-Prem
Own keys for secure data transfer

Network designed to serve an Enterprise

Deployed to cover specific Enterprise Application needs
Improved coverage, range, density with custom QoS

Not to be shared without prior consent from the LoRa Alliance

Lens LoRaWAN®- only Join Server in Cloud

NETWORK TYPES

Public

Subscription Based
Just like a cell phone

Well-established network providers

Better for:

- Low CapEX
- Mobility
- Speed of deployment
- QoS/SLA-based Network Management

Enterprise (private)

Owner Operated
Mission-Critical System

Well established companies

Better for:

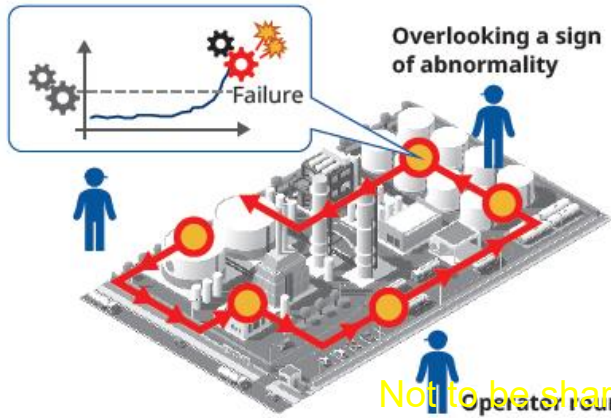

- Low OpEx
- Control of IP and own network
- Leveraging edge intelligence
- Reduced backhaul costs

Not to be shared without prior consent from the LoRa Alliance

Higher Ongoing Opex Costs

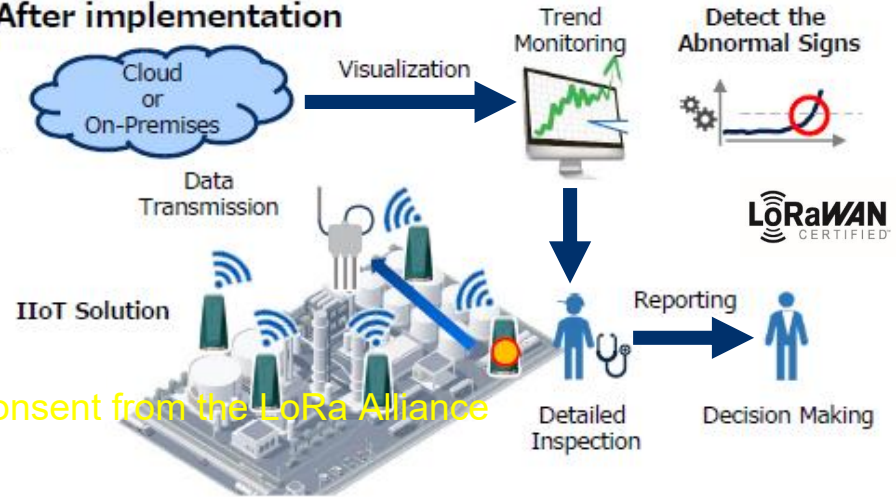

Higher Upfront Capital Expense

Case Study: Yokogawa Sushi Sensor – Efficient Field Work

Not to be shared without prior consent from the LoRa Alliance

After implementation

Before

Outsourced vibration measurement for 200 items

$\$20 * 12 * 200 = \$48,000 / \text{yr}$

Inspection results were not digitalized.

→ Customer could not utilize the data.

After

No recurring fees

- Realtime equipment status check
- Automatic warnings to technicians.

→ Enables digital transformation.

LoRaWAN® Digital Pest Management Use Case

Overview

Industry: Digital Pest Management

Description: Operates as a life science company through four divisions including Pharmaceuticals, Consumer Health, Crop Science, and Animal Health segments

Business Issue, Solution, and Business Value

Business Issue

- Build a better mouse trap” and create a rapid-response system that enables companies to spot, thwart—and eventually predict—rodent incursions before they grow out of control. Wanted local decision-making and networks to reduce backhaul costs, control data flow over network and mitigate against internet loss.

Solution

- MultiTech® partnered with the customer and added sensors to the rodent trap, paired with a LoRaWAN radio to transmit capture data to a central gateway, which relays the real-time data to a cloud platform.

MultiConnect® Conduit®

MultiConnect
xDot®

Not to be shared without prior consent from the LoRa Alliance

Business Value

- This system **reduced** the time needed to manually inspect traps by an average of **60%** while enabling improved food safety and compliance monitoring and reporting

LoRaWAN® Private Network Benefits

- Custom application deployment
 - Load and manage your application on gateways
- Reduced cost and greater control of data packets
 - Only Join Request packets sent to the cloud
 - Your custom application decides what data is sent to the cloud for visualization
 - Network Availability Not to be shared without prior consent from the LoRa Alliance
- Realization of edge intelligence and event processing capability
- No geographic restrictions
- Your own private LoRaWAN® network

From 2017:
A new way of management
for Water, Energy
and Critical Processes

Connected to daily hotel activity, involving
GM, TE, HoD.

Bringing new skills to hotels for building
systems management.

Until 2016, a tool for:
Manual data collection
Monthly report for Technical Engineer
2 reviews/year

70

70 hotels in 2018 (BE, DE, ES, FR, GB, NL)
+ 55 in 2019 (+ BR, IT, PL, PT)
Target: 850+ hotels in 26 countries by 2021.

126

126 references in our connected devices catalogue from 9 european suppliers.

11

Not to be shared without prior consent from the LoRa Alliance

11 video tutorials, 1 web&mobile application for provisioning,
1 helpdesk available by phone and e-mail.

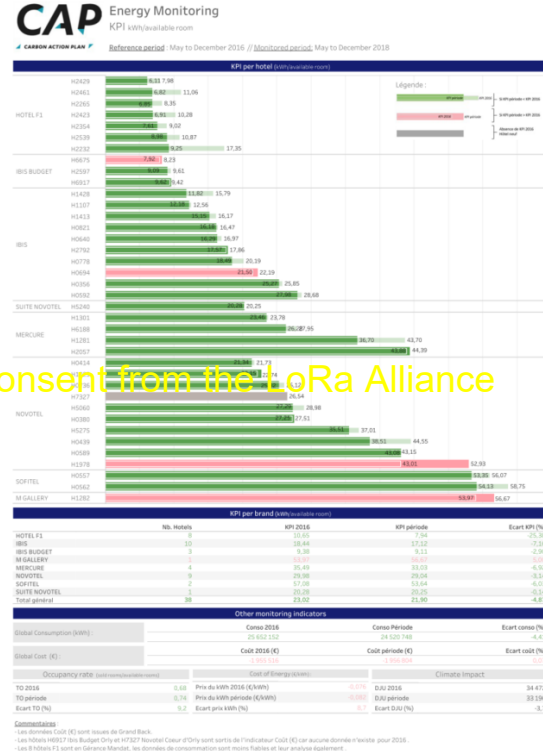

1

1 flexible, cutting-edge, accorinvest-owned infrastructure and software environment for connected buildings.

5286

5286 data streams including 2956 streams from LoRaWAN devices and 2330 streams from web and internal services.

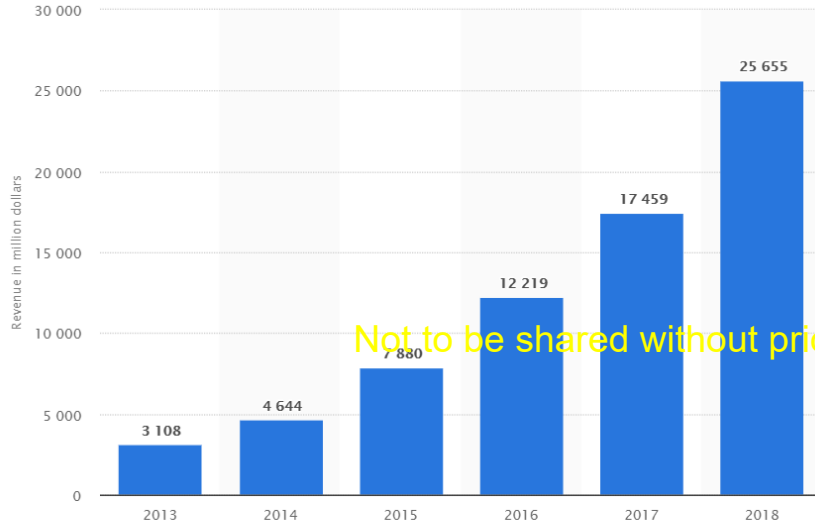

A key-feature: getting results

About DIGIMONDO

Not to be shared without prior consent from the LoRa Alliance

DIGIMONDO

- Based in Hamburg
- Provider for IoT software solutions
- Simplify digital transformation, automation, visualization and IoT

DIGIMONDO's goals

Not to be shared without prior consent from The LoRa Alliance

DIGIMONDO

- Make IoT and building automation for public buildings as simple as possible
- Use IoT for local municipality and ensure a safe work environment

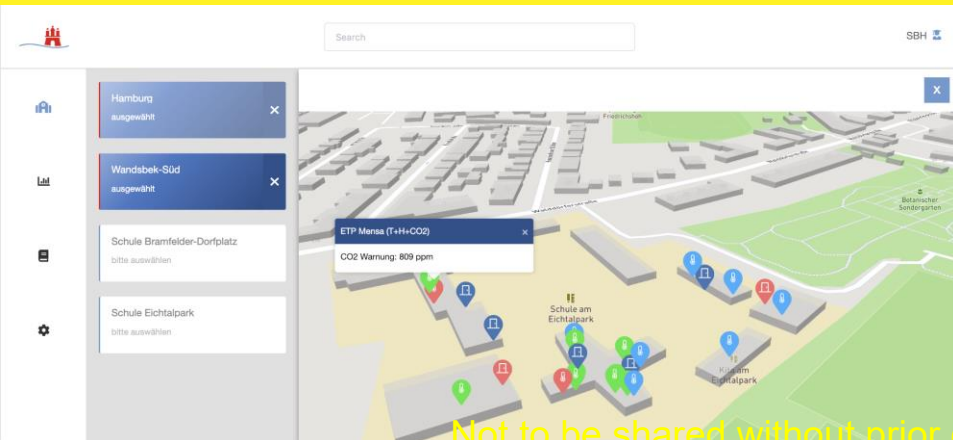

How DIGIMONDO uses LoRaWAN® to make schools smarter

Not to be shared without prior consent from the LoRa Alliance

- Janitor Peter has many tasks at school
- The school ground is extensive and utilized by many people
- Last year, the toilets were vandalized at night
- Bad air quality makes children perform worse in schools

The solution: MONITORING WITH REDUCED PERSONNEL EXPENSES

- ✓ Wireless monitoring of schools with LoRaWAN®
- ✓ Integrated 3D app to show alarms about CO² or open doors in real time
- ✓ Battery operated
- ✓ Easy installation
- ✓ Next step: LoRaWAN® network for locking system in sports facilities in Hamburg

How public building companies and schools benefit from LoRaWAN®

Not to be shared without prior consent from the LoRa Alliance

- Facility management companies bear the risk of liability for public buildings
→ **LoRaWAN® prevents risks and warns before potential damage**
- Instead of 30.000 transponder cards (25 € each) for all sports facilities in Hamburg, companies only need one locking system
→ **LoRaWAN reduces costs and staff**
- Schools become bigger and more difficult to maintain
→ **LoRaWAN establishes a better learning atmosphere, reduces costs and staff**

How DIGIMONDO uses LoRaWAN® to ensure shaft control

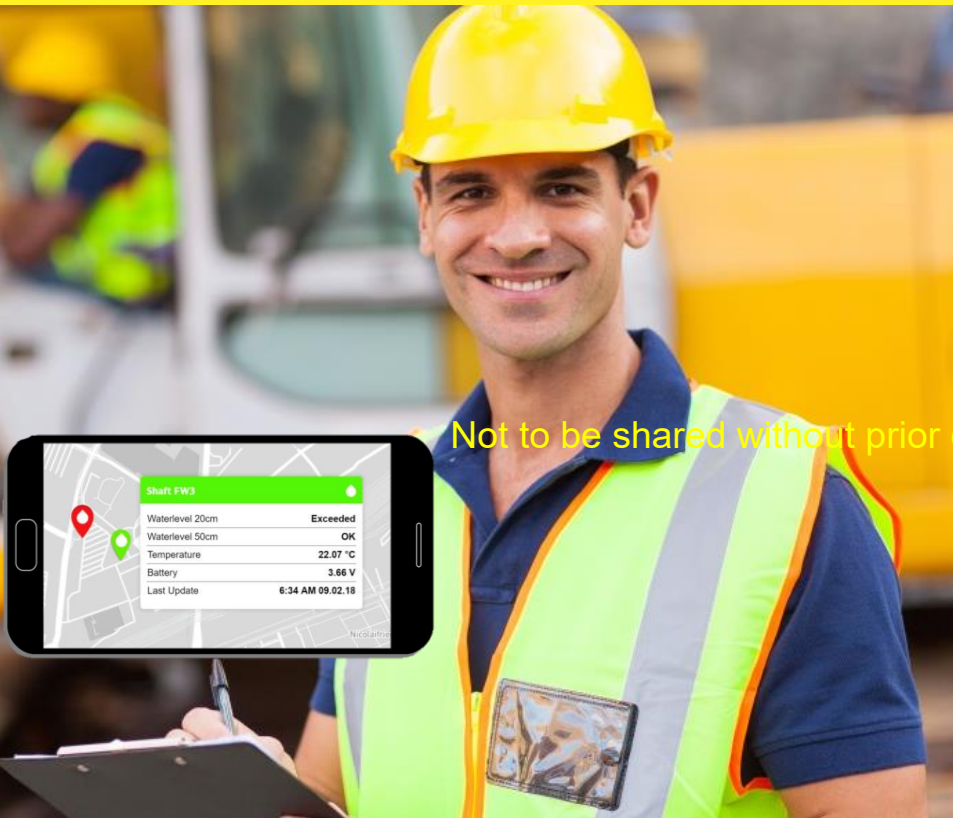

- Andreas, father of 2 children, works at a local municipality
- Every week, he has to climb down shafts
- Shaft control is necessary and unpredictable for the workers
- Opening is narrow and slippery
- Just recently, a colleague fell and was badly injured

The solution: NO MORE UNNECESSARY CHECK-UPS!

- ✓ Wireless monitoring of schools with LoRaWAN®
- ✓ Integrated 3D app to show alarms in real time
- ✓ Battery operated
- ✓ Easy installation

How local municipalities benefit from LoRaWAN®

Not to be shared without prior consent from the LoRa Alliance

- Damages on pipes are difficult to detect and cost-intensive
→ **LoRaWAN® simplifies monitoring, gives warning before the damage and reduces costs**
- Workers at local municipalities need to conduct shaft inspections regularly
→ **LoRaWAN reduces personnel costs and worktime**

BITKOM Contest „Digitale Stadt“

- In November 2016 BITKOM (Germany's Telco and IT industry association) initiated the contest „Digitale Stadt“
- The Goal: The model city of the future sponsored by BITKOM companies
- The Prize: Two-digit million amount worth of goods and consulting services
- All cities with a population of up to 150.000 inhabitants could participate
- Darmstadt emerged successful from this contest

PROJECT OVERVIEW

Highly innovative, high-visibility projects

Administration:

- Community service account
- On-line application management
- Introducing „E-Akte“
- GovBot (Chatbot)

Mobility:

- Smart Traffic
- Multimodal Transport App
- Semi-autonomous tram testing
- Autonomous Minibuses
- Smart Parking
- Traffic light sensors

Commerce:

- Location-based Services / Marketing
- Online trading platform with Same-Day Delivery
- Connection / Expansion via Ebay on-line trading platform
- City Logistics

Education:

- Model Project Digitale Schulen 2020
- „Haus der Digitalen Medienbildung“ education portal
- Digital education map

Society:

- Digital City Lab
- District App / Digital Neighborhood Support
- Data visualization
- Expansion of citizen participation platform
- Live Streaming of City Council meetings and other city events

Environment:

- Smart Waste
- Smart Zoo Vivarium
- Mobility portal – city carpool
- Environmental sensor network

Health:

- Digital patient records
- Data cross-link between hospitals and healthcare providers
- On-line Check-In to Klinikum Darmstadt
- Chatrooms for target group-specific on-line consultation and help

Safety / disaster control:

- Drones and cameras for situation control
- Digital mobile mission data collection for emergency services
- Digital control center setup

Energy:

- Smart Lighting / Intelligent Street Lighting
- Area concepts for building stock / local power generation (Mieterstrom 2.0)
- Smart Grid / Smart Meter expansion

IT Infrastructure:

- Setting up LoRaWAN as basis for IoT Applications
- Test field 5G
- Expanding Darmstadt Wi-Fi

Cyber Security:

- Encryption between city administration and local economy
- Intelligent virus detection through artificial intelligence (Working title)
- High security data platform

Data platform:

- Creation of an overarching data platform
- Core aspects of Internet of Things, E-Administration, Open Data
- Connection / Interface between different companies' IT systems

Real-time occupancy information in 400 offices for 200.000 users

H.W. Scholten Capgemini

Not to be shared without prior consent from the LoRa Alliance

Creating Valuable

IoT

Connections

Capgemini

Capgemini's Corporate Real Estate Services (CRES) wanted to monitor 1.6 million sqm of office space and measure the usage (400 offices, 200000 employees, 60 countries, 10000 meeting rooms)

Space
Optimization

Comfort

SQM
Rightsizing

Sustainability

Not to be shared without prior consent from the LoRa Alliance

- Reducing no-shows in meeting rooms (used to be 30%)
- Show availability of meeting rooms and desk in real-time

- Measure CO2, noise, light, humidity and temperature
- Real time dashboard for users showing area specifics

- Increase space utilization from 65% to 75% by reducing SQM at contract renewals

- Less SQM results in less Carbon footprint
- Less travel (plane/car) by investing in communication equipment

Why we have chosen LoRaWAN®?

Easy installation

Low maintenance

Minimum infrastructure

Retrofitting

Global scalability

Agnostic

Secure

GDPR compliant

Data efficient

Fine-Tuning Your LoRaWAN® Deployments

Becky Oh, President and CEO PNI Sensor

**Creating
Valuable**

IoT

Connections

Not to be shared without prior consent from the LoRa Alliance

Who we are

- PNI is the world's foremost expert in precision location, motion tracking, and fusion of sensor systems into real-world applications
 - Founded in 1987 out of Stanford University with the invention of Magneto-Inductive sensor technology
 - PNI's products and technologies are used by leading, global companies in applications where a high degree of accuracy, continuous reliability, and low power consumption are required
- Not to be shared without prior consent from the LoRa Alliance
- Products include:
 - High-performance geomagnetic sensors
 - Location and motion coprocessors
 - Military-grade sensor modules
 - Sensor fusion algorithms
 - Complete sensor systems

Applications

What you will learn

- How to effectively trouble-shoot nodes and network deployments
- Benefits of using the proper device to test network signal strength
- How to effectively solve difficult corner cases
- Best practices from successful LoRaWAN® Smart Parking deployments

Not to be shared without prior consent from the LoRa Alliance

Best case scenario

- LoRaWAN® network successfully deployed
- End nodes are functioning according to spec and communicating to the LoRaWAN
- Proof of concept is live
- Customer is happy

Not to be shared without prior consent from the LoRa Alliance

But sometimes...

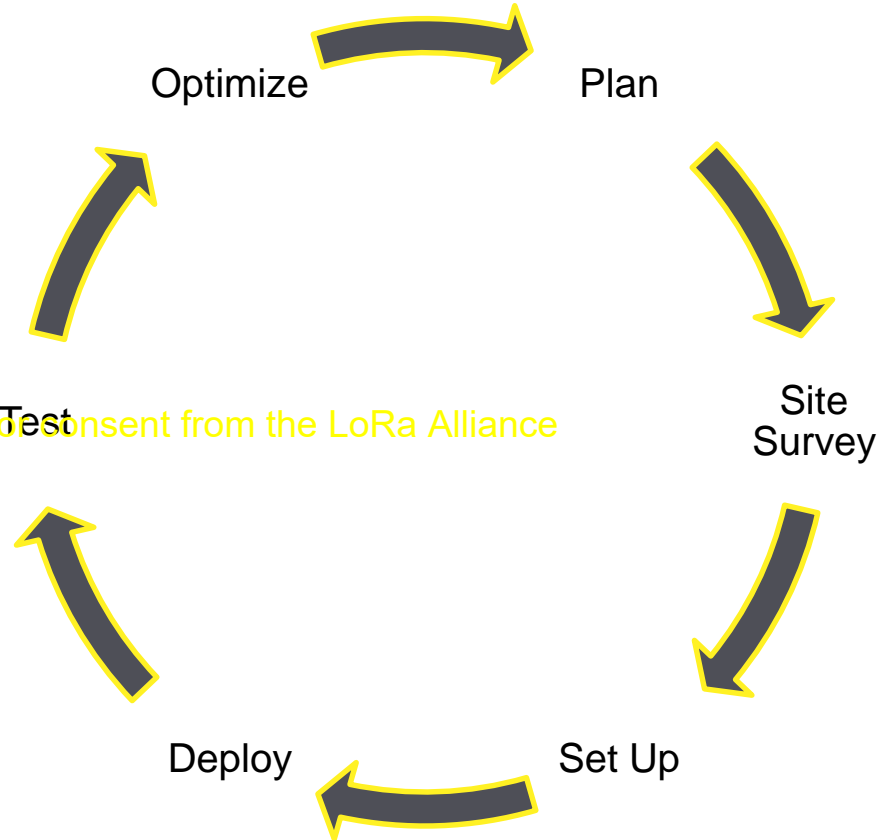

- Data stops flowing
- Nodes are not functioning
- Network is inoperable
- IoT project fails

Not to be shared without prior consent from the LoRa Alliance

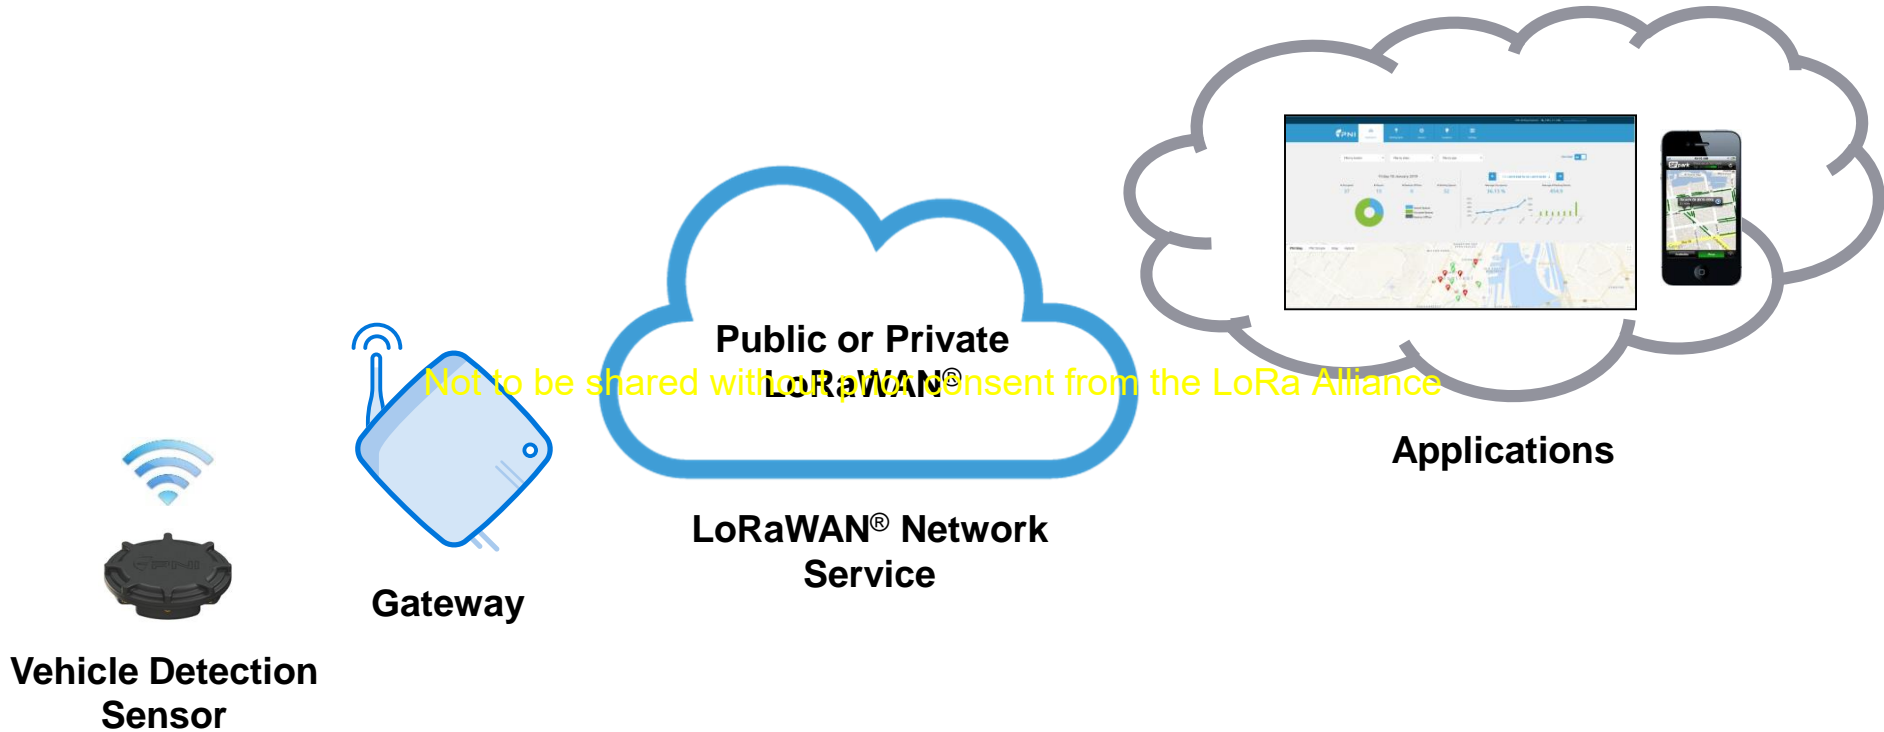

Best practices for LoRaWAN® deployments

- Perform a site survey *prior* to installation
- Test for RSSI with the actual end device vs. a generic testing tool
- Test for the device manufacturer's recommended RSSI values
- Troubleshoot issues and make improvements

Use Case – Smart Parking

Use Case: City of Montréal

- **Need:** Monitor on-street parking spaces in business district to reduce traffic congestion and manage enforcement
- **Situation:** Smart parking managed on a public LoRaWAN®
- **Challenge:** Sensor must function reliably in harsh weather; installation sites are in deep “urban canyons”

Not to be shared without prior consent from the LoRa Alliance

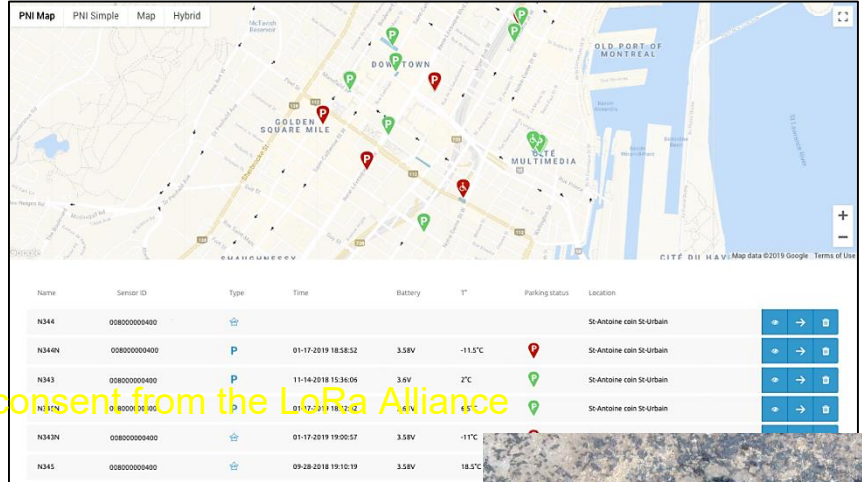

Use Case: City of Montréal

• Solution:

- Tested parking sensors for -90dBm in spaces without car present
- Recommended adding more gateways to optimize network performance
- Deployed gateways in a higher location based on RSSI results
- Parking sensors buried in-ground
- Sensors reliably filter interference from passing traffic

Not to be shared without prior consent from the LoRa Alliance

Use Case: Nvidia Corporate Headquarters

- **Need:** Monitor space availability in parking garage of new, state of the art corporate campus in Silicon Valley
- **Situation:** Nvidia uses a private, on-premise LoRaWAN[®]
- **Challenge:** Garage has multiple stories; contains rebar-reinforced concrete obstructions; signal “dead zone” in center of garage

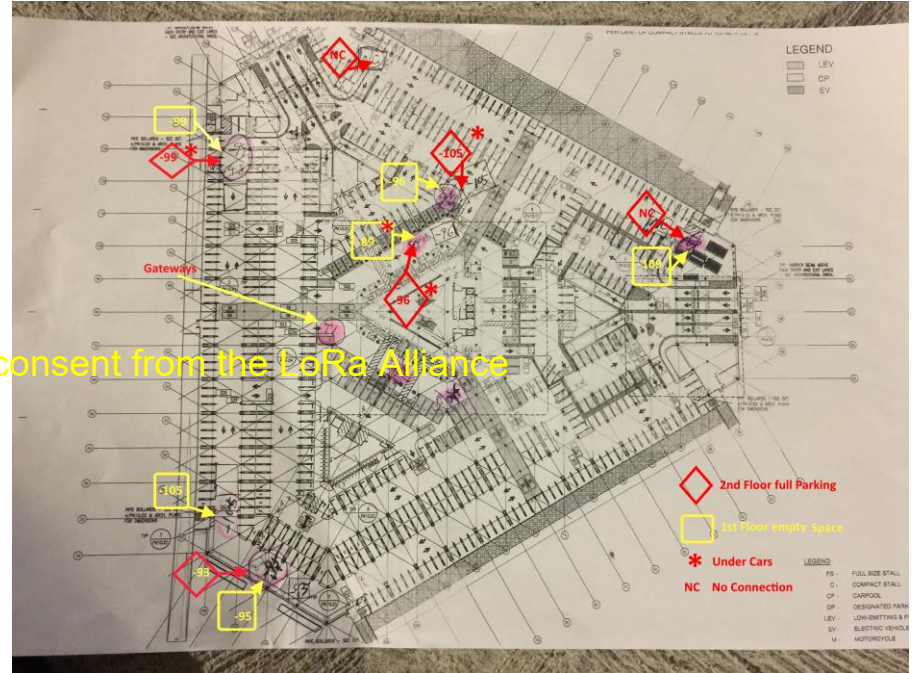

Use Case: Nvidia Corporate Headquarters

• Solution:

- Tested parking sensors for -90dBm in spaces without car present
- Added two gateways per level to account for the unique layout/shape of garage
- Used more powerful gateway antennas
- Installed surface-mount sensors in each parking space

Not to be shared without prior consent from the LoRa Alliance

Use Case: City of El Monte, California

- **Need:** Monitor space availability in city-managed parking lot and direct drivers where to park
- **Situation:** City uses a public LoRaWAN®
- **Challenge:** Large parking lot with an alley; integration with digital sign

Not to be shared without prior consent from the LoRa Alliance

Case Study: City of El Monte, California

• Solution:

- Tested parking sensors for -90dBm in spaces without car present
- Mounted gateway high on light pole in center of lot to reach edge devices
- Used more powerful gateway antenna
- Installed in-ground sensors in each parking space
- Integrated with digital sign to guide drivers to rows with available parking

Not to be shared without prior consent from the LoRa Alliance

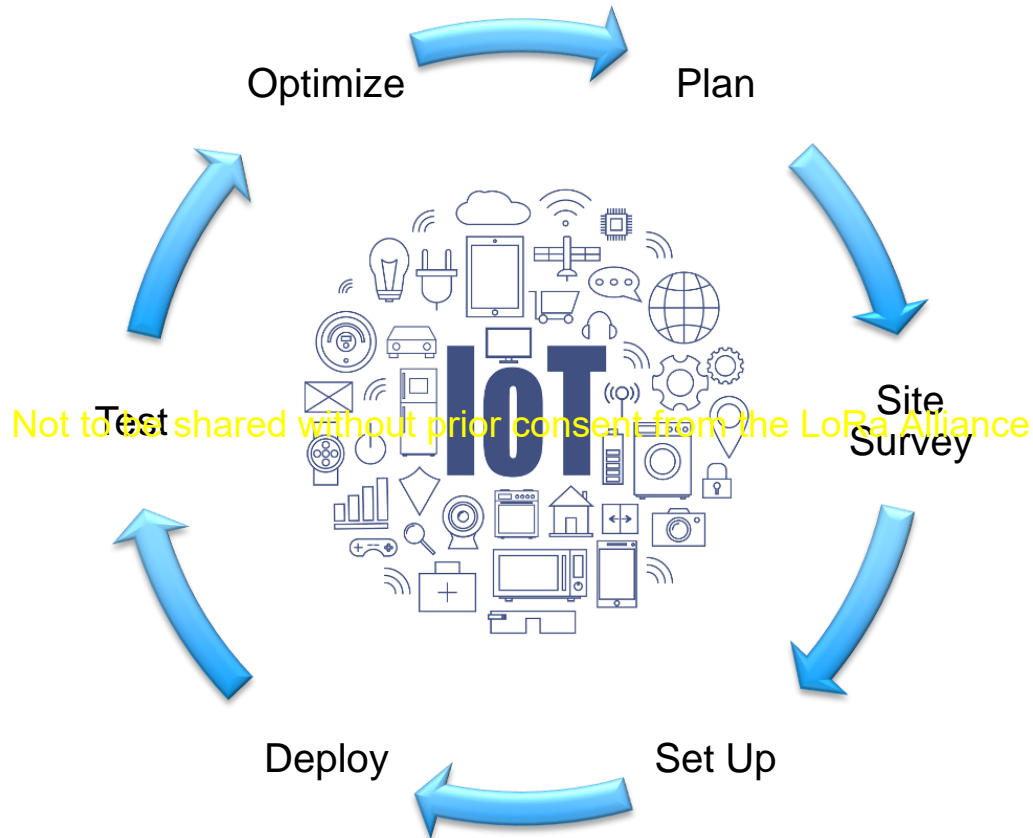

Factors to consider

- Density of gateways for **RELIABLE** network performance
- Placement of gateways
- Nearby buildings and obstructions
- Antenna size
- Device performance characteristics

Not to be shared without prior consent from the LoRa Alliance

Best practices for LoRaWAN® deployments

Prepare for success!

LoRaWAN® Deployment at Schneider Electric

Maxime Loidreau

IoT Sensors Program Manager – 13th of June 2019

**Creating
Valuable**

IoT

Connections

Not to be shared without prior consent from the LoRa Alliance

Agenda – LoRaWAN® Deployment at Schneider Electric

- Connect the unconnected assets...
 - About us, Our Assets
 - Our Challenges
- Implementation at Schneider Electric
 - => Enabling seamless integration in Schneider Electric world
- Business is starting:
 - “Easy Smart Panel” offer launched in march 2019
 - Looking forward to scale up together with the ecosystem

Not to be shared without prior consent from the LoRa Alliance

About us...

Schneider Electric, leading the digital transformation of Energy Management and Automation

€24.7 billion

FY 2017 revenues

~5%

of FY revenues devoted to R&D

142,000+

people in 100+ countries

Not to be shared without prior consent from the LoRa Alliance

Our Products & Solutions

– FY 2017 revenues

Balanced geographies – FY 2017 revenues

Our Challenge: Connect the unconnected assets...

Many of our assets are difficult to connect...

- Our assets...

...are placed in location like
basement or technical cabinet

Not to be shared without prior consent from the LoRa Alliance

"Deep indoor"

...are sold via a chain of
intermediaries

"Remove complexity"

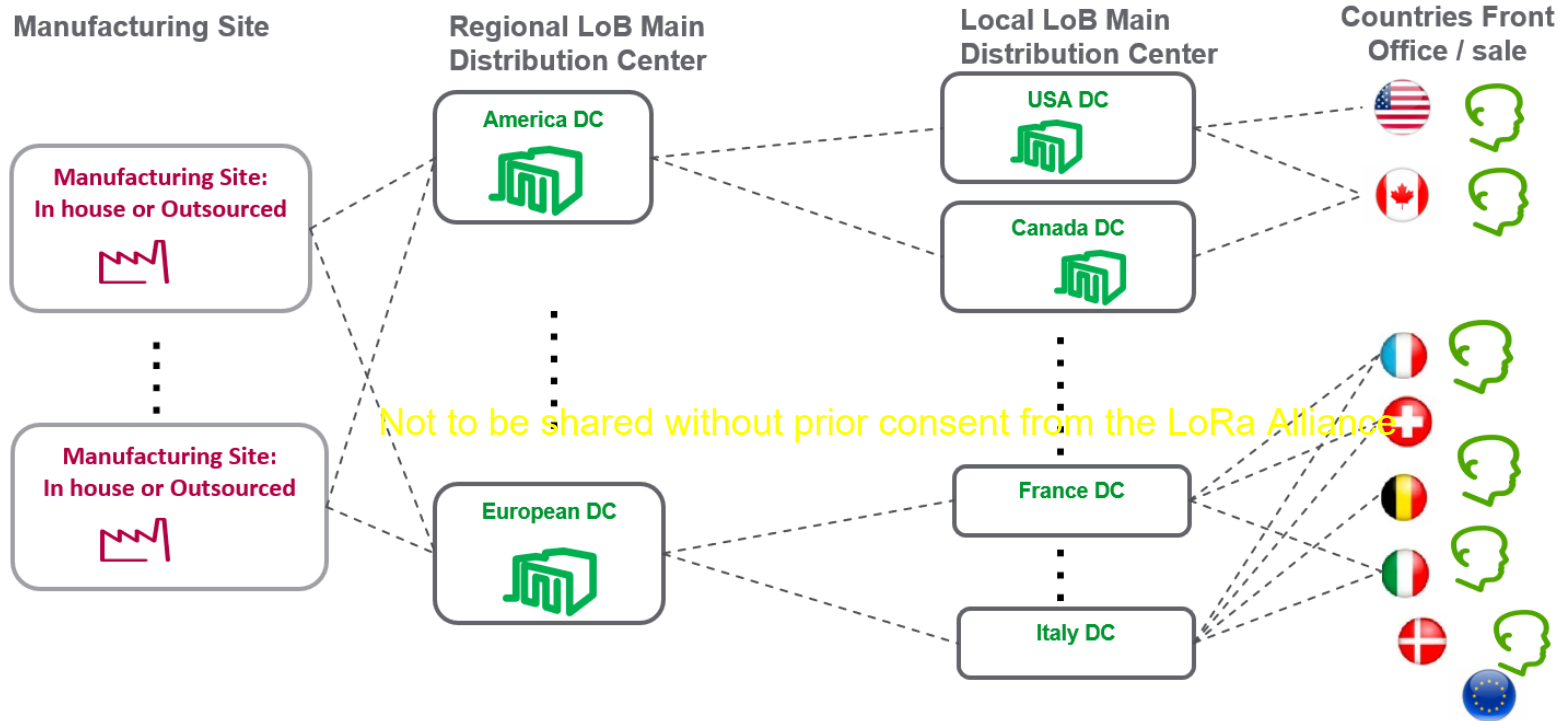

...have no access to IT networks
... are installed early in the
building phase

...stay for 20 years in the field

"Low TCO of connectivity is
mandatory"

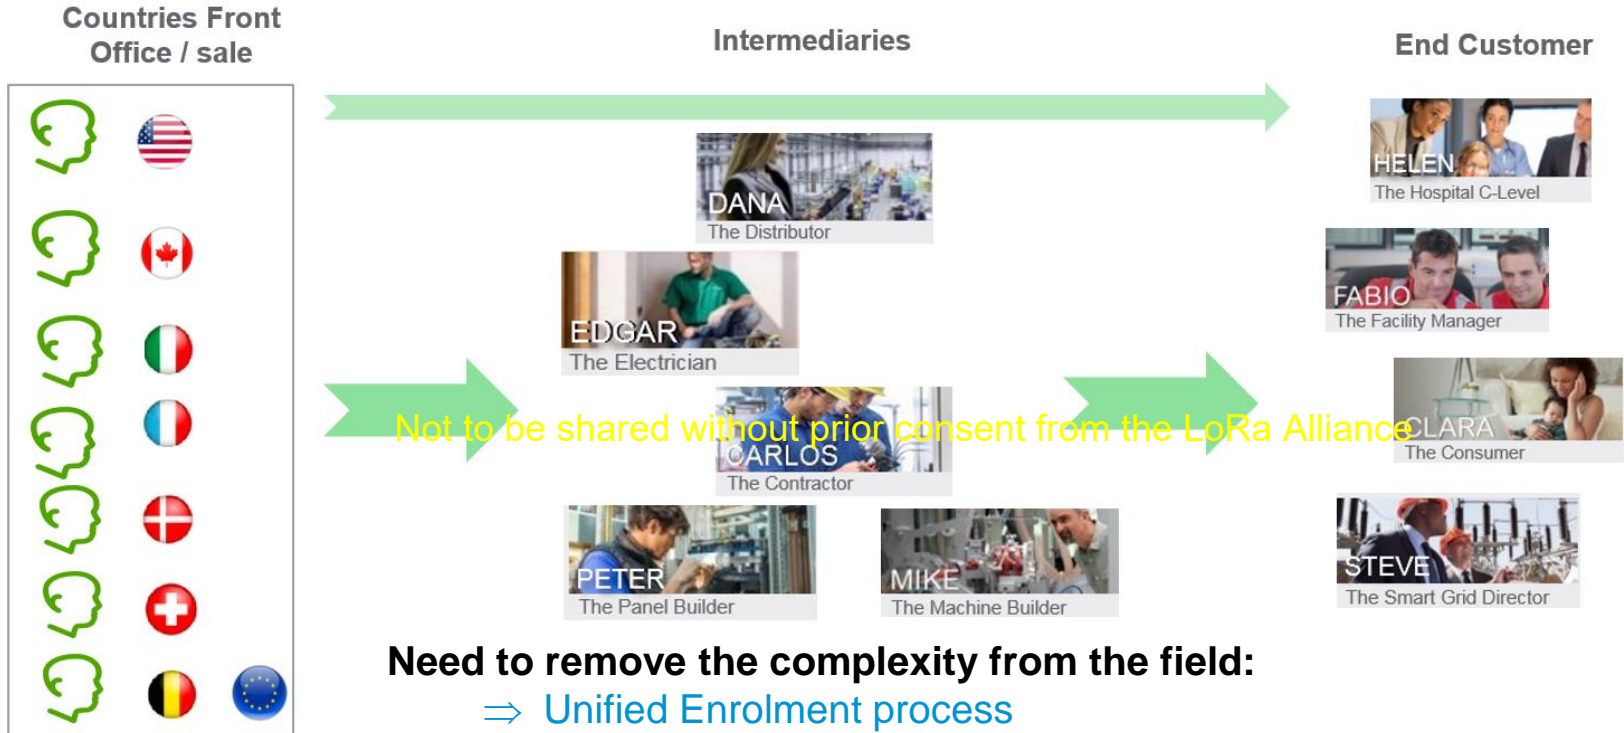

LoRaWAN® offers a solution to meet
this requirements...

Challenge over the whole chain: Manufacturing - Supply chain - Chanel

=> Mandatory to know target Network at manufacturing time to ensure Secure manufacturing

Our Challenge over the whole chain

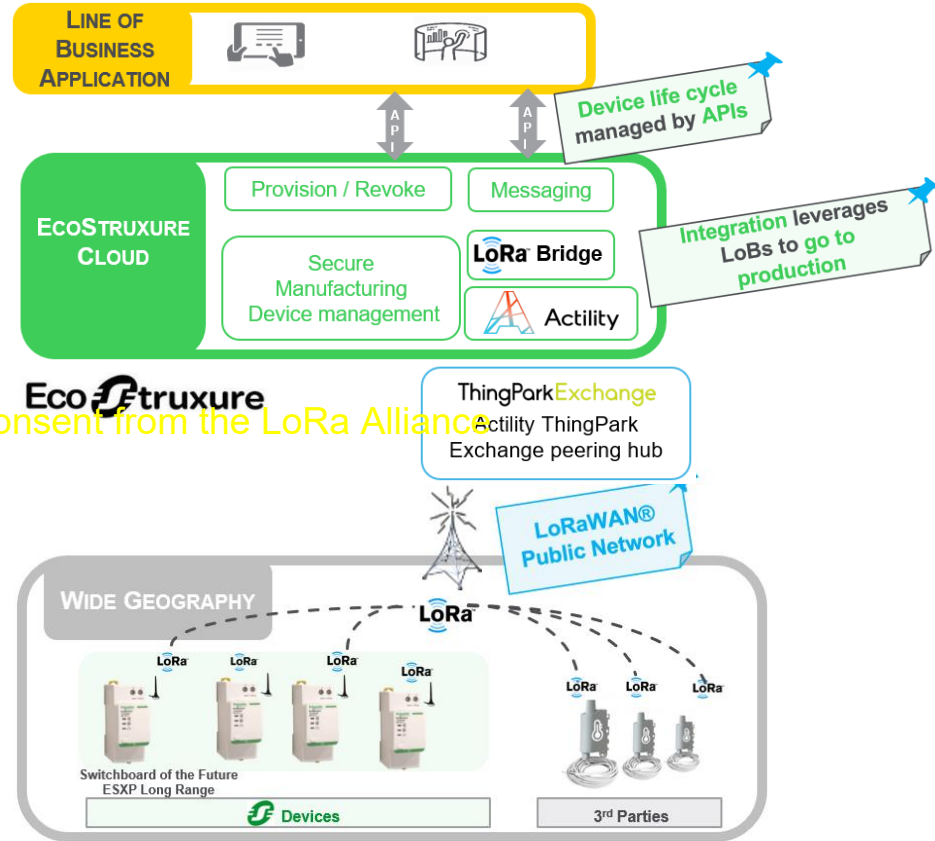

Need to remove the complexity from the field:

- ⇒ Unified Enrolment process
- ⇒ Seamless Integration
- ⇒ Cybersecurity by design / Secure Manufacturing

- Challenges: **Security** and **ease of use**
- End to End Cybersecurity
- Unified enrollment process for diversity of our Offers and for various geography
- Unified access to Public and Private Network worldwide

Not to be shared without prior consent from the LoRa Alliance

Schneider Electric launching “Easy Smart Panel”

Smart electrical panels for simple and efficient maintenance

Commercially launched since
March 2019 in France,
Switzerland, Belgium

Looking forward to launch in
Italy, Russia, Netherland
Sweden, United Kingdom...

Heat Damage Prevention

- *FireTag*: wireless sensor to generate alert by detecting overheating cables through gas emissions

Wireless Energy measurement & Voltage loss Alarm

- *PowerTag*: wireless energy sensors continuously measure power and generate alert notification for voltage loss.

Mobile platform for maintenance

- *EcoStruxure™ Facility Expert*: cloud-based application for managing maintenance plans, real-time notification of alert and simple energy monitoring

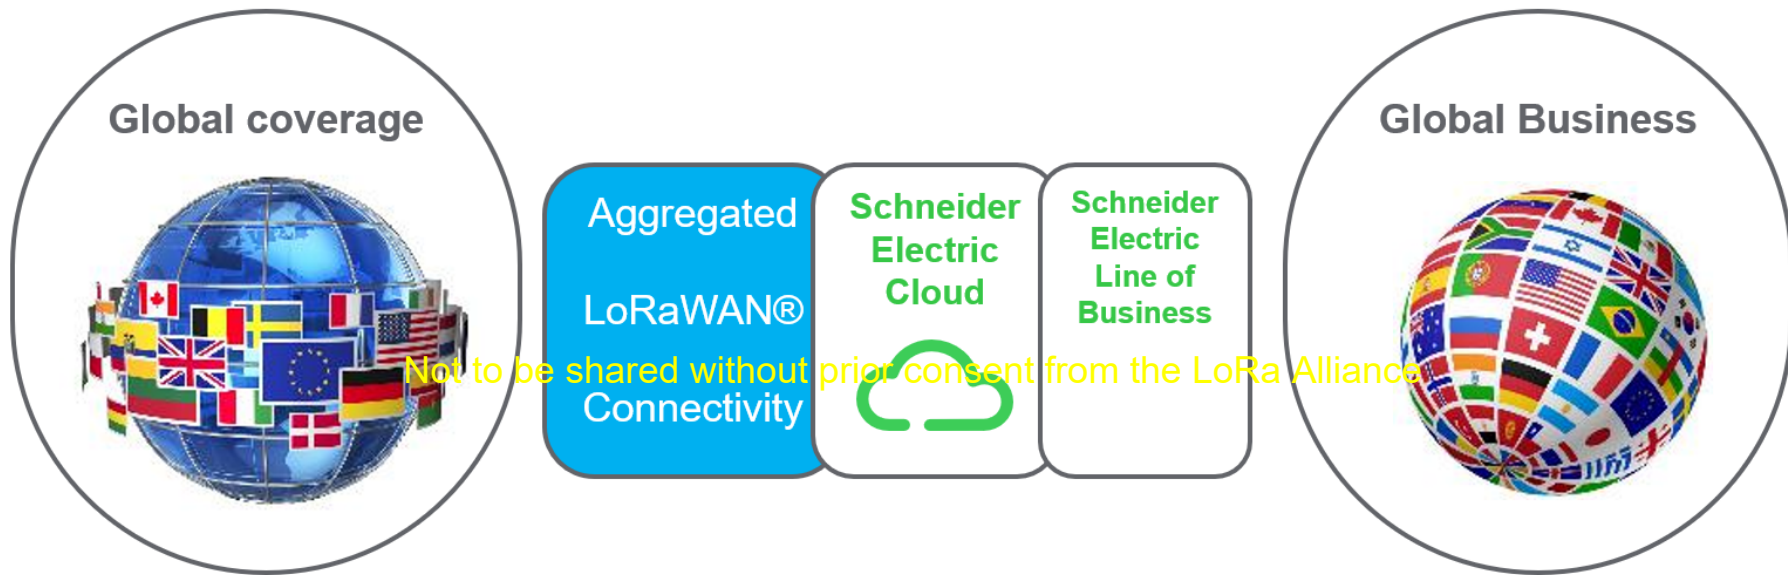

Wireless Gateway Connection

- *Gateway Long range*: gateway enables wireless communication for alert on mobile platform

Presented at the Booth

Looking forward to scale up together...

Easy global connectivity over LoRaWAN® ecosystem is mandatory to reach maturity phase

How LoRaWAN® transforms business

Not to be shared without prior consent from the LoRa Alliance

Andrea Krämer
Managing Director Minol Sales, Marketing & Product Management

OUR BUSINESS

- We are the digitisation partner for the housing & real estate industry
- We offer services for energy consumption & performance
- Our core: smart services for measuring, monitoring, consumption and billing for heating & water
- Additional services & solutions for smoke detectors, energy performance certificates & legionella check

Not to be shared without prior consent from the LoRa Alliance

LoRaWAN®: THE REASON WHY

Remote read out of consumption data:

- Future-proof in alignment with European Energy Directive (EED)
- High data availability & data quality
- Automation of processes
 - saves tenant's time
 - allows service improvements & less cars on the road

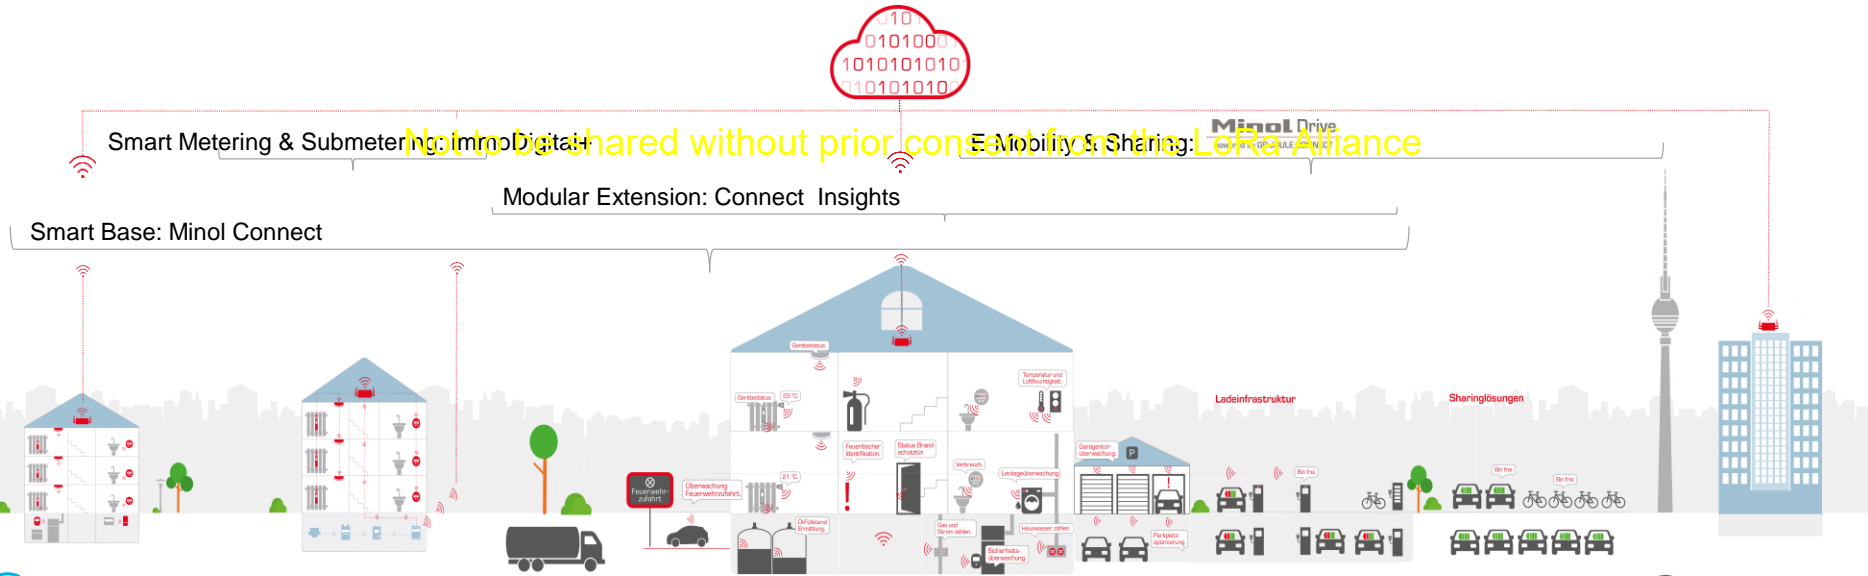

Not to be shared without prior consent from the LoRa Alliance

The future is connected:

- Standardised, open, secure, reliable & scalable
- Deep indoor coverage, no need for repeaters
- Battery based end devices, long-lasting

YESTERDAY & TODAY

- **Yesterday | Technology Island:** getting data via visits on site & walk-by radio technology
- **Today | Ecosystem**
 - Reliable, powerful infrastructure based on LoRaWAN® serving our traditional business (AMR)
 - IoT infrastructure enabling additional services integrating best of breed 3rd party devices
