Sigma Technology Solutions has been a professional competence partner to iioote, Gothenburg-based industrial IoT provider, for several years. As iioote is preparing to scale up and launch new solutions, Sigma experts are ready to support them with high-end IoT competences.

iioote accelerates IoT's development with advanced technologies helping organizations make smart and sustainable decisions. iioote develop high-performing IoT solutions and provide IoT consultancy for their customers in industrial, municipal, and public sectors.

Recently, iioote has successfully introduced innovative industrial IoT solutions using power efficient sensors to clients e.g. in the waste management and recycling sector, helping them collect information on the number of visitors, weather dependency, behavior patterns, and containers' usage. With the help of data, organizations can optimize their processes and resources, automate operations, and implement predictive maintenance.

"Following UN sustainable development goals, we aim to minimize the waste of resources and help industrial and service companies make smart and sustainable decisions. The industrial IoT solutions and services that we provide to our clients can measure many kinds of data to analyze usage, behavioral patterns, and efficiency of our client's business. With this information, they can optimize their resources, minimize environmental footprint, and save their costs. Moreover, sensors keep track of the number of visitors in the premises, helping clients avoid crowds and follow health recommendations, which is especially important in the post-pandemic times," says Robert Spertina.

During the rollout of iioote's IoT-solutions, Sigma's information engineer has contributed to creating user-centered product information for their product, helping iioote deliver excellent product experience.

"iioote's vision of bringing the power of data and connectivity to help people make smart decisions is close to us. We are looking forward to continuing cooperation in the area of Internet of Things, data analytics, and information management in the future," says Robert Åberg, Head of Digital Services at Sigma Technology Solutions.

About iioote AB

iioote work with companies, organizations, and municipalities in implementing IoT in their business, from analysis need and strategy to planning, implementation and system integration. iioote has expertise in IoT, IT and Telecom, combined with industry-specific skills from the construction, machinery, and automotive industries. iioote integrates solutions that drive the development of simple and innovative IoT in the community. This is enabled by radio systems that use low-energy technology, Low Power Wide Area Networks (LPWAN).

About Sigma Technology

Sigma Technology is a part of Sigma Group and is a global supplier of product information, embedded and software design, and offshore development. We are experts with a passion for technology and information and take pride in delivering quality and constantly improving our deliveries. Our philosophy is "Local Drive – Global Strength", therefore we have offices worldwide to be close to our customers. For a complete picture, visit sigmatechnology.se.
