

Go-IoT Joins LoRa Alliance

Company Creates Advanced LoRaWAN® to BACnet® Server

OBJECTIVE

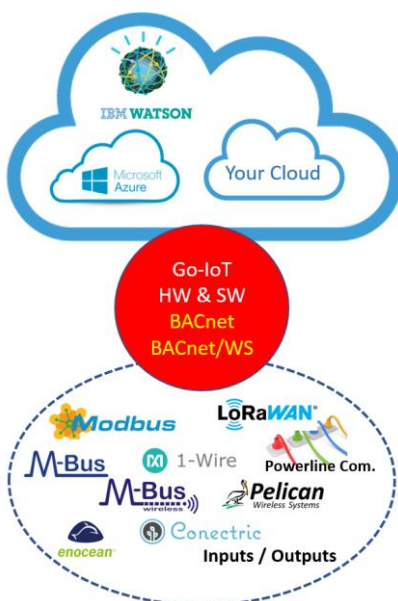

To virtualize LoRaWAN® devices as BACnet® devices in the BMS.

Greatly simplify integrating LoRaWAN® devices into the BMS without configuration or programming.

AUTO-CONFIGURATION

As soon as a LoRaWAN® device joins the LoRaWAN® network, it is transformed to a virtual BACnet® device on the BACnet/IP network by template.

ABOUT GO-IOT

PRESS RELEASE

Iceland & London, UK • Feb. 4th 2021

Go-IoT an Icelandic / UK based IoT technology development company announces that it has joined the [LoRa Alliance](#) as an adopter member. This membership will allow Go-IoT to accelerate the adoption and integration of the LoRaWAN® protocol around the world. The LoRa Alliance is an open, nonprofit association which began in March 2015 and currently has in excess of 500 members.

Go-IoT is currently focusing on LoRaWAN® as their wireless platform for sensors and actuators in Building Management Systems. It is adding full support for LoRaWAN® in their software platform DINGO-Stack as well as the hardware platform DINGO-BACkbone and WISKA sensors.

ABOUT GO-IOT

MAKE EVERYTHING BACNET® • BRING IT TO THE CLOUD • SECURITY

Go-IoT is a UK and Iceland based company. Its main focus is to create open standard based solutions for the Building Management Industry. In particular it focuses on virtualizing different device protocols as BACnet® protocol and bringing BACnet® to the Cloud via its implementation of the BACnet/WS standard (Web Services, REST based).

Currently under development are the LoRaWAN® based WISKA sensors which are due for release in Q3 2021.

Go-IoT develops and markets both hardware and software. It also consults and offers service their customers.

Go-IoT has customers worldwide including Norway, UK, Canada and USA.

Go-IoT sells its products worldwide via their distributor Innovelec in UK. (www.innovelec.co.uk)
