

Otii Arc

Product Specification

Otii Arc comes with the featured-packed standard Otii software. Made for hardware, firmware and software developers.

Otii Arc

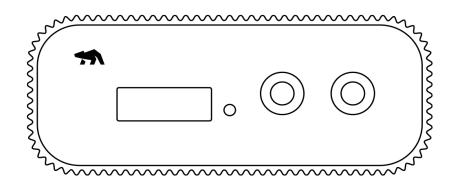

Otii Arc is a small, portable power supply, a current and voltage measurement unit and a data-acquisition module. It can be powered by USB or by using an external DC-adapter. See technical specification below.

Otii is shipped with a USB A cable.

Otii desktop application

Otii Standard comes with a powerful and easy-to-use desktop application for Windows, Ubuntu & macOS. Use it to collect and analyze data from Otii Arc. It also exports the data to CSV.

⁽I) USB power capacity and reliability in laptops and desktops greatly depend on host USB port/cable design.

 $^{^{\}mbox{\tiny (2)}}$ See list of recommended external power supplies and powered USB hubs at our FAQ

⁽³⁾ Depends on chosen power supply. Otii Arc will monitor internal temperature and cut off if temperature limit is reached.

 $^{^{(4)}}$ Sink voltage can go below this specification if locked to high range. It is possible to go down to 0.5 V if the sink current is below 1.9

A. For currents below 19 mA, the measurement will have a lot more noise when locked to high range than in auto range.

 $^{^{(5)}}$ Up to 19 mA current in auto range, for higher currents, the accuracy is $\pm (0.1\% + 150 \,\mu\text{A})$. Average > 1 s.

⁽⁶⁾ See Nexperia SN74LVC8T245 for details.

 $^{^{\}mbox{\tiny (7)}}$ Expansion Port Digital voltage level is set by user in Otii SW.

⁽⁸⁾ Maximum voltage will depend on your USB power supply and USB cable.

⁽⁹⁾ See TI INA226 for details.
